## Beta Testing Feedback

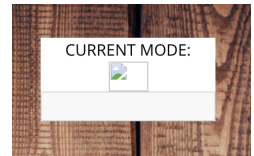

After spending an hour playing the “Jass” Game of group 25 we came to the following conclusions and feedbacks.

### Positives

- We like the design elements & pictures chosen, it's nice to see skeuomorphism designs nowadays
- Really nice drag animation when placing the card
- Many options to choose from, a lot of flexibility in the Game Settings
- The distinction between public & friends is also quite useful

### Suggestions

- Change the favicon to make it easier to spot & identify your website
- Make game table a bit bigger
- When no game mode is selected at the start we see this placeholder
- Display names of users on table
- Change the title of your Application “SoPra FS21 - Group XX”
- Ability to leave a game prematurely
- Signal who won the round

### Bug Reporting

- Not always able to create a lobby - It is possible to go out of the lobby screen without leaving the lobby, therefore you're not able anymore to join any other lobby.
- Enter as guest → internal server error
- Refreshing the game page returns all the cards again
- Lobbies are not deleted
- User can sometimes place multiple cards
- The game does not end when all players have placed their cards
- Although I'm logged in, I'm being forwarded to the login page whenever I go to the “/” directory
